Document processing guide

PDF2Data sample document

1. Input

Choose a PDF and a document type. The original file is retained.

Digital text is read directly; scanned pages may need local OCR.

2. Processing

Extraction retains page text, candidate structure, tables and source spans.

Verification checks source identity and text coverage.

Quality flags remain separate from processing completion.

3. Outputs

One continuous document and structured records are available after export.

Format	Purpose
Markdown	Continuous document
HTML	Document and source views
JSON	Structured records and relationships
Word	Editable document

4. Review

Check flagged content against the source before relying on extracted values.
